

Cpanel Directadmin Cloud

Directadmin, Cpanel and Cloud Web hosting packages

If you are looking for a reseller hosting package [please click here](#).

If you are looking for maximum uptime and optimal performance, then choose any of the cloud hosting packages.

Guru-host's shared web hosting packages are based on two well known control panels; that is Directadmin and Cpanel along with our custom solutions based on cloud (multiple servers with 100% uptime). All control panels are easy to use with great features. Some prefer Cpanel because they used to and some Directadmin for the same reason and some other our control panel because of its simplicity and the great uptime. If you are sure about what web hosting control panel you want to then you can move on and place your order from the packages below otherwise spend a few minutes to read more about each control panel on the bottom of the page.

PACKAGE	DISK SPACE	TRAFFIC	OS	PRICE
Small Business	1024MB	50GB	CentOS 64bit	5€/month Order
Corporate	1500MB	100GB	CentOS 64bit	13€/month Order
Extreme	2GB	150GB	CentOS 64bit	16€/month Order

[Details about the Directadmin shared hosting packages](#)

E-Mail Menu. Users can create POP/IMAP accounts, catch-all e-mail addresses, forwarders, mailing lists, autoresponders, and webmail. Filters allow users to block mail by domain, keyword, and size. Adult Filter is also available.

FTP Menu. Users can create FTP accounts and set directory permissions for each account. Anonymous FTP is also supported.

DNS Menu. Users can add and remove records, change MX settings, and anything else that goes with full DNS control.

Statistics Menu. Users have available every possible statistic about their account. More advanced options and Webalizer are also included.

Subdomains Menu. Users can list, create, delete, and get statistics on subdomains.

File Manager. A user-friendly and fast alternative to FTP. Includes every feature needed to build and maintain a web site.

MySQL Databases. Users can easily create, modify, and delete MySQL databases from this menu.

Site Backup. Using this powerful tool, users can backup and restore only what they want to. For example, account data but not web site files.

Error Pages. Users can create custom messages and outputs for 401, 403, 404, and 500 error

codes.

Directory Password Protection. Users can password protect any directory with a username and password.

Advanced Tools. Users can install SSL certificates, view sever information and installed perl modules, set cron jobs, mime types, and apache handlers, and enable site redirection and domain pointers.

You do not need to choose Windows or Linux hosting package as our cluster platform support both! As soon as your account will be enabled you will be able to create/add new website based on either Linux or Windows! Get the flexibility to run any ASP or .NET application and any Perl, CGI, PHP script from the same control panel!

Assume that you have a client who bought a CMS (Content Management System) written in .NET or ASP and another customer with a CMS written in PHP or Perl. You will need to login to our control panel and click on add domain. As soon as you choose this a drop down menu will appear with the options to select in what Operating System this domain will be based; that is Windows or Linux. Point your 1st customer to the Windows server and the 2nd to the Linux and all are happy! A detailed FAQ can be found [here](#).

You can browse our gallery with many screenshots of the control panel to get an idea how easy is to work with, [click here to move](#) on to gallery.

Get a free domain if you pay biennially

Facts for Directadmin:

Directadmin is faster than Cpanel on both end user interface and admin Directadmin can run on Debian (much more stable Linux distribution than any other) Web based automatic tool to secure your server via a freeware plugin (fix almost any security issue) Option to keep as many backups as you wish while Cpanel can only hold daily, weekly and monthly Cheaper packages due to cheaper license Flexibility to install almost anything you like regarding version (PHP, MySQL etc). Gallery with screenshots can be [found here](#).

Facts for Cpanel:

More features to the end user than Directadmin Easier to deal when you are an administrator (root) of the server Many migration scripts from other control panels along with an excellent interface, maybe the best of all. Check out some screenshots [here](#).

Facts for Cloud hosting:

Cloud computing is Internet-based computing, whereby shared servers provide resources, software, and data to computers and other devices on demand, as with the electricity grid. Cloud computing is a natural evolution of the widespread adoption of virtualization, Service-oriented architecture and utility computing.

Clouds often appear as single points of access for consumers' computing needs. That means that 20+ servers act as one so in case of a hardware failure simply the second server takes the load and so on.

This is the ultimate hosting package. You can get an idea of the control panel while visiting our [gallery section](#).
